Our interfaces to your TMS/ERP and telematics system

Allow you to create processes that save time and increase cost efficiency.

From on-boarding to commissioning and on through to implementation: we support you in digitalising and optimising your transport process. By working in a single system, you do more than just save time and money by increasing efficiency, you also increase transparency towards more than 50,000 potential international business partners.

Automate your transport processes now!

 # Integration with the freight exchange

Transfer offers into the Smart Logistics System with a single click.

Avoid duplicate entries and transcription errors.

Work with a single program to create your freight and vehicle space offers. An integrated button allows you to transfer your offers to the freight and vehicle space applications.

- ✔ one-time entry of freight and vehicle space offers
- ✔ avoid transcription errors with automatic data transfers
- ✔ increased offer visibility, with more than 50,000 potential business partners

Automate your freight entries now

Transport orders automatically transferred directly from your TMS

Digitally process legally binding transport orders.

Your business partner receives the transport order with their TIMOCOM ID and can accept the order using a legally binding process, and you never even had to exit your own logistics system.

- ✓ increased efficiency thanks to direct order acceptance/assignation – save time and money
- ✓ order processing is legally binding and entirely digital
- ✓ sustainable streamlining of work processes

Digitalise transport orders now

Use full automation to send and archive transport orders including all necessary documents, and accept them as legally binding contracts.

GPS data from over 286 telematics providers on a single map

Benefit from the transfer of GPS data from different providers to your own in real time.

No additional app or software required: Share your GPS data in your TMS's mapping service. Process positional data and use it, for example, to calculate ETAs and inform your sub-contractors when the goods will arrive.

- ✓ optimised processes thanks to standardised data formats
- ✓ real-time data transfer to internal company map programs saves time and money
- ✓ increased transparency increases planning security

Bundle GPS data now

Transfer GPS data from common telematics providers to your own systems, forward the information to your sub-contractors, use it to calculate ETAs and improve your planning processes.

Let's talk about it!
