

Pallet Lid Case Study

VOLKSWAGEN KASSEL

“The Loadhog Pallet Lid is the perfect solution to secure a load on a pallet. It is a reusable system and can easily be reused for several years. Cassettes for the strapping band can be purchased inexpensively as spare parts without having to purchase a new lid. The reusable system results in the complete elimination of waste from disposable material in the exchange of goods. The unique design with six grip zones eliminates the need to bend down to fasten and remove the wrapping film and strapping band. Thanks to the Loadhog products, we have improved our efficiency while saving costs & reducing waste!”

The Loadhog Pallet Lid

The most secure, versatile and cost effective method of securing the load on a pallet, no banding or stretch wrap required.

Volkswagen Kassel - Benefits experienced

Improved Efficiency

The Pallet Lid is used to move transition parts between production lines/sites. This solution is faster and ergonomically better than banding and removes double handling.

Removal of Banding

Volkswagen wished to completely remove banding and other operational costs. The process was tedious and there was also no downtime for mending broken banding machines.

Time Saving

The previous process is very time consuming and intense. Using the Pallet Lid, Volkswagen recorded a minimum time saving of 99.52 seconds per pallet.

Lid Stock Availability

The Pallet Lids are easily procured which enables fast reaction to unforeseen increases in demand.
